HOW TO GET WEATHER WARNINGS

The National Weather Service issues weather bulletins 24 hours a day.

- > **Tornado Warnings**
- > **Severe T-storm Warnings**
- > **Flash Flood Warnings**

**YOUR SAFETY
DEPENDS ON YOU
BEING ABLE TO
RECEIVE THESE
WARNINGS NO
MATTER WHERE
YOU ARE –
AT HOME OR
ON THE GO.**

Prepared by the National Weather Service Forecast Office
Peachtree City, Georgia

NOAA WEATHER RADIO (ALL HAZARDS)

- Most NOAA Weather Radios are designed for use in homes, offices, and schools.
- However, there are various **portable** receiver options available.
- The National Weather Service uses NOAA Weather Radio to send out unique tones.
- These tones activate special receivers at locations throughout Georgia and the U.S.
- The NOAA Weather Radio will typically sound an audible alarm followed by the details of the weather warning.
- For more information on NOAA Weather Radios and locations to buy them, go online to:
<http://www.weather.gov/nwr/>

DIGITAL MOBILE DEVICES

- Cell phones, pagers, text messengers, PDAs.
- Private companies have developed alert services.
- Free services available.
- See a list of service providers on the back of this brochure.

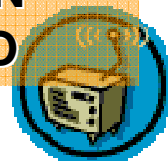

INTERNET

- Numerous sites on the World Wide Web provide weather information, warnings, and other important weather bulletins.
- For an interactive map showing warnings for the entire nation, point your web browser to:
<http://www.weather.gov/largemap.php>

<http://>

COMMERCIAL TELEVISION AND RADIO

- Many TV and Radio stations stay on top of developing weather situations.
- They monitor conditions and relay National Weather Service Warnings to their viewers and listeners as soon as the warning arrives in their studios.

OUTDOOR SIRENS

- Outdoor sirens are a great supplement to the other methods of warning.
- However, they are not intended to be your primary source of notification.
- Outdoor sirens are not available in all communities.
